**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/IT03/00387

1. Because the applicant did not paid additional fees following the request of the International Search Authority, which raised an objection of lack of unity of invention for the present application (Rules 13.1 and 13.2 PCT), only the group of claims 1-25 have been made the subject of the examination.
2. The document WO-A-00/10892 (cited in the description) is regarded as being the closest prior Art to the subject-matter of independent claim 1. It discloses a carton according to the preamble of claim 1 from which the subject-matter of claim 1 differs in that the bottom wall of the first container comprises at least one through hole sized to permit insertion of a user's finger.
The subject-matter of claim 1 is therefore new (Article 33(2) PCT).
The problem to be solved by the invention is that of making easier for the user to extract a packet of cigarettes from the container.
The solution to this problem proposed in claim 1 is neither known from, nor rendered obvious by, the available prior Art and is considered as involving an inventive step (Article 33(3) PCT).
- 2.1 Claim 1-25 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.
3. The following inconsistency between the subject-matter of claim 1 and the description is observed.
Claim 1 defines a carton box formed by two containers, the bottom wall of the first container comprising *at least one* through hole (to permit insertion of a user's finger). The description at page 7, lines 16 to 21, however, reveals that this arrangement is only *a further embodiment* of the invention, rather than the only possible, according to claim 1. Moreover the same paragraph is inconsistent with the matter of claim 1 in that it discloses a through hole *for each packet of cigarettes* instead of *a single one* (see claim 1: *at least one through hole*).
